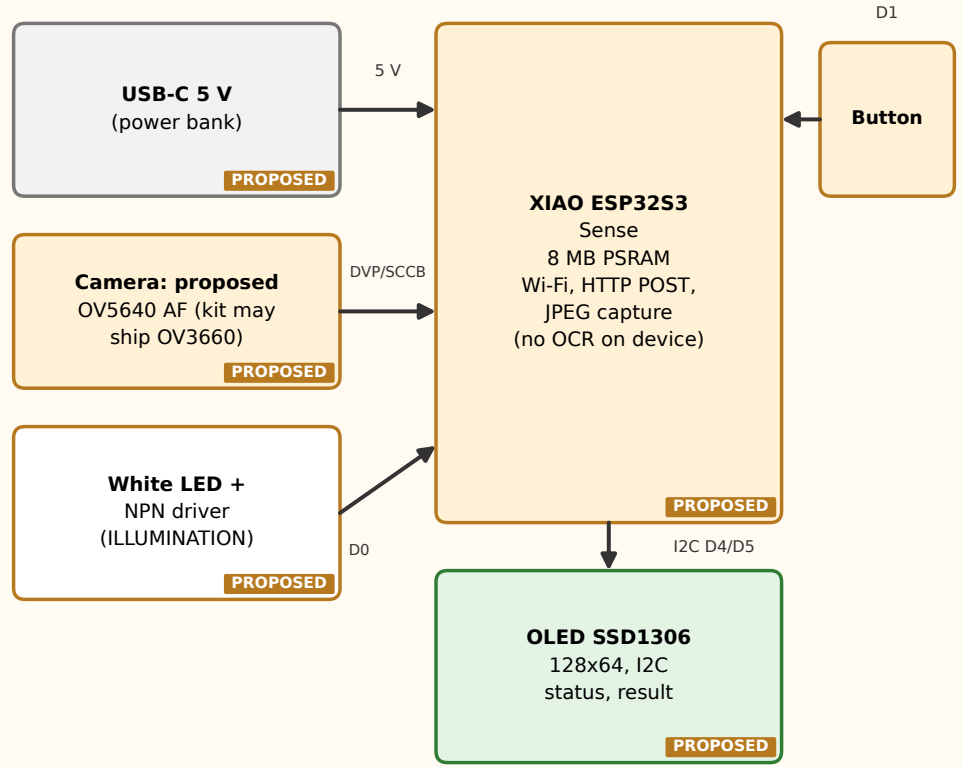
Wrist-worn camera unit layout (PROPOSED design: not built, not simulated as a whole)

Electrical block layout (XIAO ESP32S3 Sense, single board)

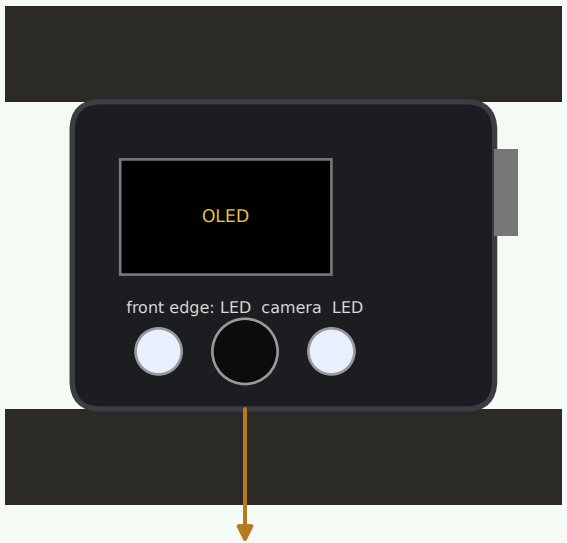


Camera GPIOs are fixed by the Sense board. Wokwi mirrors only the button, LED and OLED (no camera part exists). No board was built.

Indicative physical placement (not to scale)

Push button on the right side. The camera is the sensor; the LED only illuminates.

Wrist strap, top view of the enclosure



faces the jewellery
(about 30 mm, design target)
